Different centres and perspectives - valuable learning

International Partners

## Courses for

Simulation Instructors

Course Directors

Center Managers

## Europe and worldwide

In our courses we acknowledge the diversity of simulation around the world in terms of target groups, training goals, contents, methods, and technology used. Based on a common concept the faculty represents this diversity by coming from different simulation centres, countries and professional backgrounds.

All our courses are guided by the assumption that simulation in its different forms can help improving patient safety and quality of care. Simulation can help in optimizing the interplay between people, technology and organisation of medical care. We see simulation both, as a tool for the analysis of work systems and processes and an interventive tool. We focus on training in our collaboration but also address other interventive uses of simulation (e.g. for testing and optimizing medical devices under realistic conditions).

We aim for a secure and friendly, yet challenging working atmosphere. Our courses all are based on needs analyses, careful course design that we update as necessary, employing a mix of methods to make the course stimulating in all phases and the learning sustainable. For this reason, we would like to stay in contact after the course and facilitate the networking between the participants in our courses and beyond.

**Target Groups** Health care professionals and all those working with simulation for education, training, and research

**Current Courses** Basic Simulation Instructor Courses • Help people learn with simulation  
Advanced Simulation Instructor Courses • Handle challenges during courses  
Course Director Courses • Plan effective simulation-based learning environments  
Center Manager Courses • Make the center work

**Methods** Experience, practice and feedback; theory inputs; hands-on workshops; structured reflections

**Faculty** Experienced faculty from the simulation centres in Copenhagen, Denmark (DIMS), Tuebingen, Germany (TuPASS), London, UK (BARTS) and distinguished international partners.
